Get a PhD in ChemE at UIC

UIC’s highly skilled and experienced faculty members mentor PhD students and work with them to perform state-of-the-art research on advanced topics, develop fundamental knowledge of complex systems and build cutting-edge technologies from nanoscale to macroscale.

Key research areas:
- Energy
- Complex Fluids
- Electrochemistry
- Advanced Materials
  - Nanotechnology
  - Biotechnology
  - Soft Matter
- Environmental Engineering

Additional research areas:
Biotransport through Nanopores, Computational Fluid Dynamics, Computational Research, Drug Delivery, Fizzics, Graphene and 2D Nanomaterials, Microelectronic Materials and Processing, Nano-Manufacturing, Optics and Optoelectronics,

Competitive financial support is available to PhD students.
